GridRescue AI · Business Model Canvas

Decision-support software for hospitals on weak grids · hospitals first · vendor-neutral · no hardware sales

Secure AI Grid · Pavan Manjunath · Thomas Prüfer
Global Energy Hackathon 2026 · Brief 12 · Clean Energy Solutions track

INVESTOR ASK · **US$ 150,000** seed · **two** tranches · commercial release in **9–12 months** · **2** paid pilots by month 9 · **10** paying sites by month 12 · *Planning targets, not achievements*

8 Key Partners

- Hospitals and health authorities
- ESCOs and energy-system integrators
- Utilities and distribution companies
- Open-data providers (incl. the OpenStreetMap / MapYourGrid community)
- Financial institutions and DFIs

7 Key Activities

- Simulation development and validation against measured data
- Software maintenance and security
- Customer onboarding
- Reporting

6 Key Resources

- Simulation engine and software IP
- Open-data pipelines (NASA POWER, PVGIS, PVWatts, Global Solar Atlas, OpenStreetMap, published tariffs)
- Energy-engineering expertise
- Cloud
- Partner network

2 Value Propositions

- **One workflow from a map pin to an investment-ready plan: site read from open data → hour-by-hour outage simulation → vendor-neutral solar + backup energy system + generator design → cost, payback and ESG report**
- Relocatable designs
- Minutes instead of weeks
- Transparent assumptions, no hardware sales

4 Customer Relationships

- Guided pilot assessment
- Annual licence with support and periodic recalculation
- Implementation-partner coordination

3 Channels

- Direct institutional sales
- ESCO and integrator partners (white-label)
- Health networks and development programmes
- The free grid mapper as the front door

1 Customer Segments

- Hospitals and clinics on weak grids (first: federal and teaching hospitals, Nigeria)
- Healthcare networks and health programmes
- ESCOs, energy-system integrators, hospital energy contractors
- Utilities (feeder planning)
- Later: data centres, water, telecom, industrial and agricultural sites

9 Cost Structure

- Development and productionisation
- Model validation
- Security and testing
- Cloud and data
- Pilot integration
- Customer acquisition
- Legal and IP
- Compliance

5 Revenue Streams

- Paid site assessment (US$ 2,000 per site, proposed)
- Annual software licence (US$ 3,000 per site, proposed)
- Enterprise multi-site and utility licences
- Integration / white-label fees
- Later: performance-based fee after verified savings

Proposed model: prices and targets require customer validation; no customer commitments asserted.

GridRescue AI sells software only · the hospital's energy-as-a-service fee is its own energy cost, not GridRescue AI revenue
